WEBSITE SITEMAP OVERVIEW

- Total of: four internal interconnected webpages for my portfolio website: Home, About Me, Blog, & Contact.
- Home page – 1st tier of navigation.
- About Me page – 2nd tier navigation.
- Blog page – 2nd tier of navigation.
- Contact page – 2nd tier of navigation.
- External pages – Pdf, Form (email), LinkedIn, Github, & Twitter.

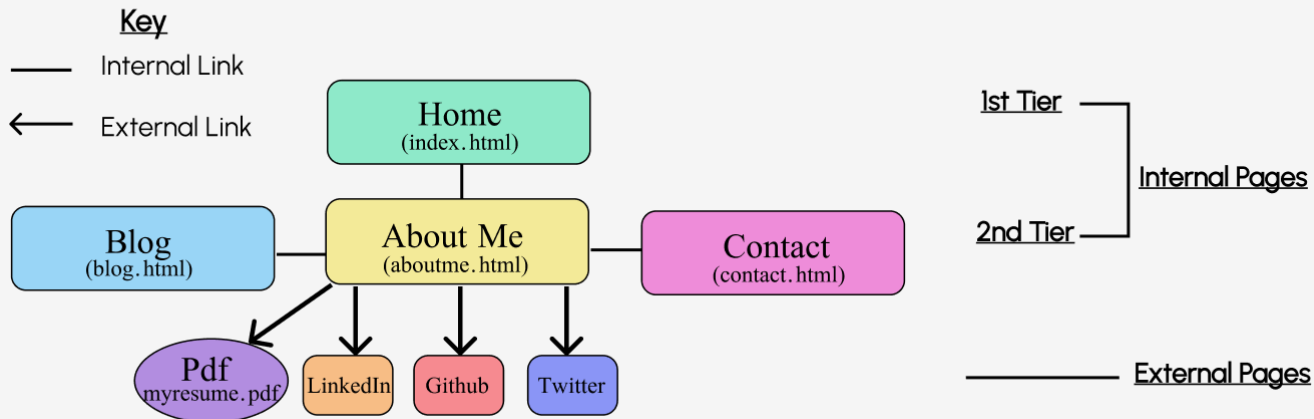

SITEMAP - HOME

- The “Home” page is part of a collection four internal pages that exist in my website.
- The “Home” page (index.html) is part of the first tier of navigation in my website.
- From the “Home” page you are able to navigate to all second tier pages. That is; the: “About Me”, “Blog”, and “Contact” pages.
- From the “Home” page you are also able to navigate to the external webpages of: “LinkedIn”, “Github”, and “Twitter”.

SITEMAP – ABOUT ME

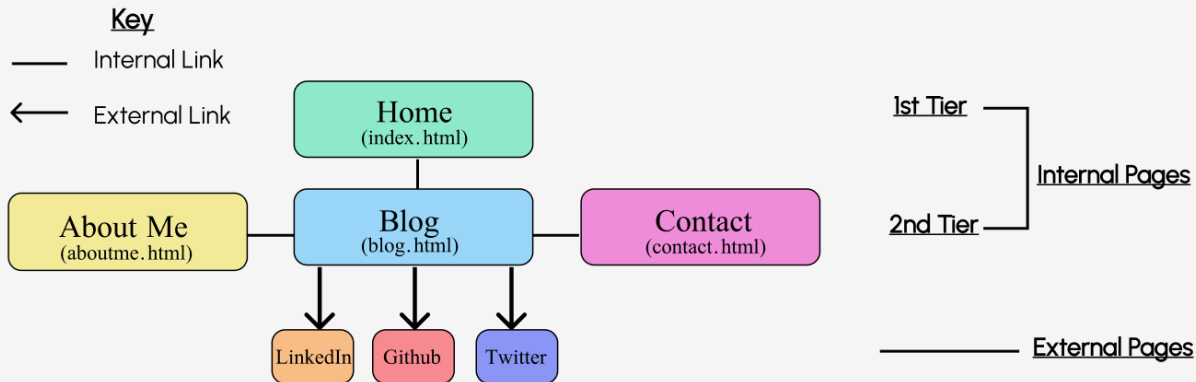

ABOUT ME SITEMAP

- The "About Me" page is part of a collection four internal pages that exist in my website.
- The "About Me" page (aboutme.html) is part of the second tier of navigation in my website.
- From the "About Me" page you are able to navigate back to the first tier "Home" page.
- From the "About Me" page you are able to navigate to all second tier pages. That is; the: "Blog", and "Contact" pages.
- From the "About Me" page you are able to navigate to an external document, that is; a "Pdf" (myresume.pdf).
- From the "About Me" page you are also able to navigate to the external webpages of: "LinkedIn", "Github", and "Twitter".

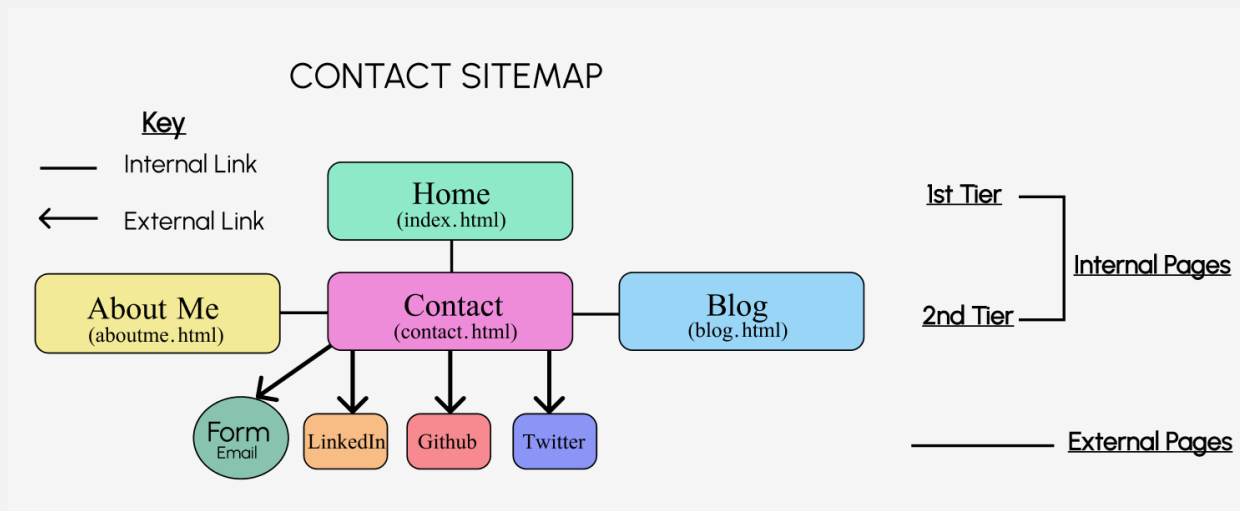

SITEMAP - BLOG

BLOG SITEMAP

- The "Blog" page is part of a collection four internal pages that exist in my website.
- The "Blog" page (blog.html) is part of the second tier of navigation in my website.
- From the "Blog" page you are able to navigate back to the first tier "Home" page.
- From the "Blog" page you are able to navigate to all second tier pages. That is; the: "About Me", and "Contact" pages.
- From the "Blog" page you are also able to navigate to the external webpages of: "LinkedIn", "Github", and "Twitter".

SITEMAP - CONTACT

- The "Contact" page is part of a collection four internal pages that exist in my website.
- The "Contact" page (contact.html) is part of the second tier of navigation in my website.
- From the "Contact" page you are able to navigate back to the first tier "Home" page.
- From the "Contact" page you are able to navigate to all second tier pages. That is; the: "About Me", and "Blog" pages.
- From the "Contact" page you are able to navigate to an external form, that is; email form.
- From the "Contact" page you are also able to navigate to the external webpages of: "LinkedIn", "Github", and "Twitter".

HOME PAGE - WIREFRAMES

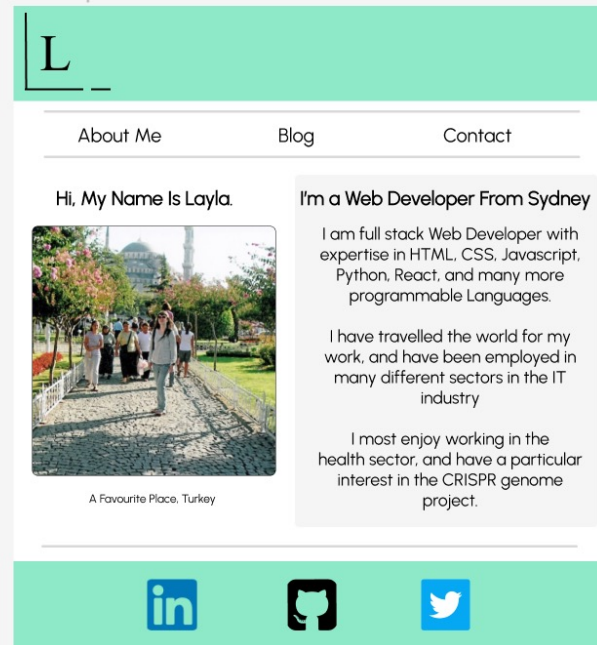

Mobile

Tablet

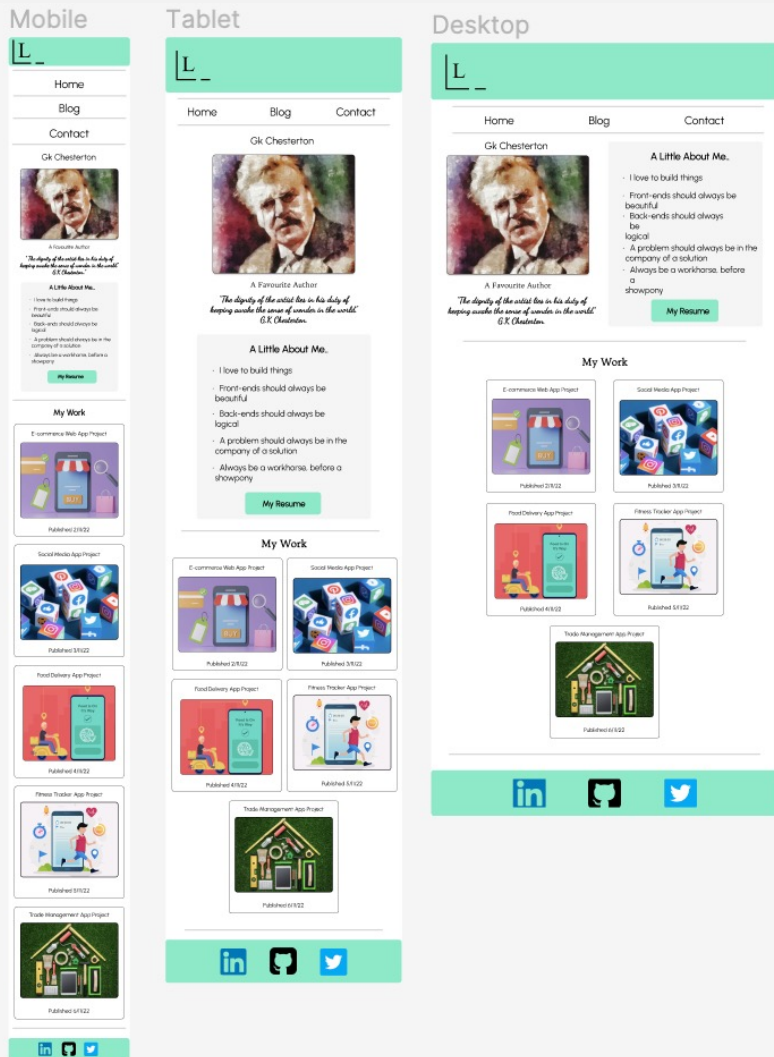

Desktop

- My Home page, like all pages has a simple colour scheme. That is four colours; Teal, light grey, white, and black.
- I wanted to keep the colour palette elegant and simple. I did not want to overstimulate the user, and disengage them from the relevant content I was trying to convey.
- My Home page was designed to be a very basic introduction to me as a Web Developer.
- An image was used to create immediate interest, and convey my love of travel.
- I used a short and sweet paragraph to detail my Web Development skills, my flexibility in work environment, and my interest in medical science.
- In the header section, my main challenge was to separate the teal banner from the menu items. I wanted to have the menu list items at full clarity for the user to see and navigate.
- My favourite part is the fixed teal banners at the top and bottom of the page/s with my own designed logo, that is also a favicon for all my pages.
- I used my own image here, and all social logos were free and available from Flaticon. So there is no ethical issue on this page.

ABOUT ME PAGE - WIREFRAMES

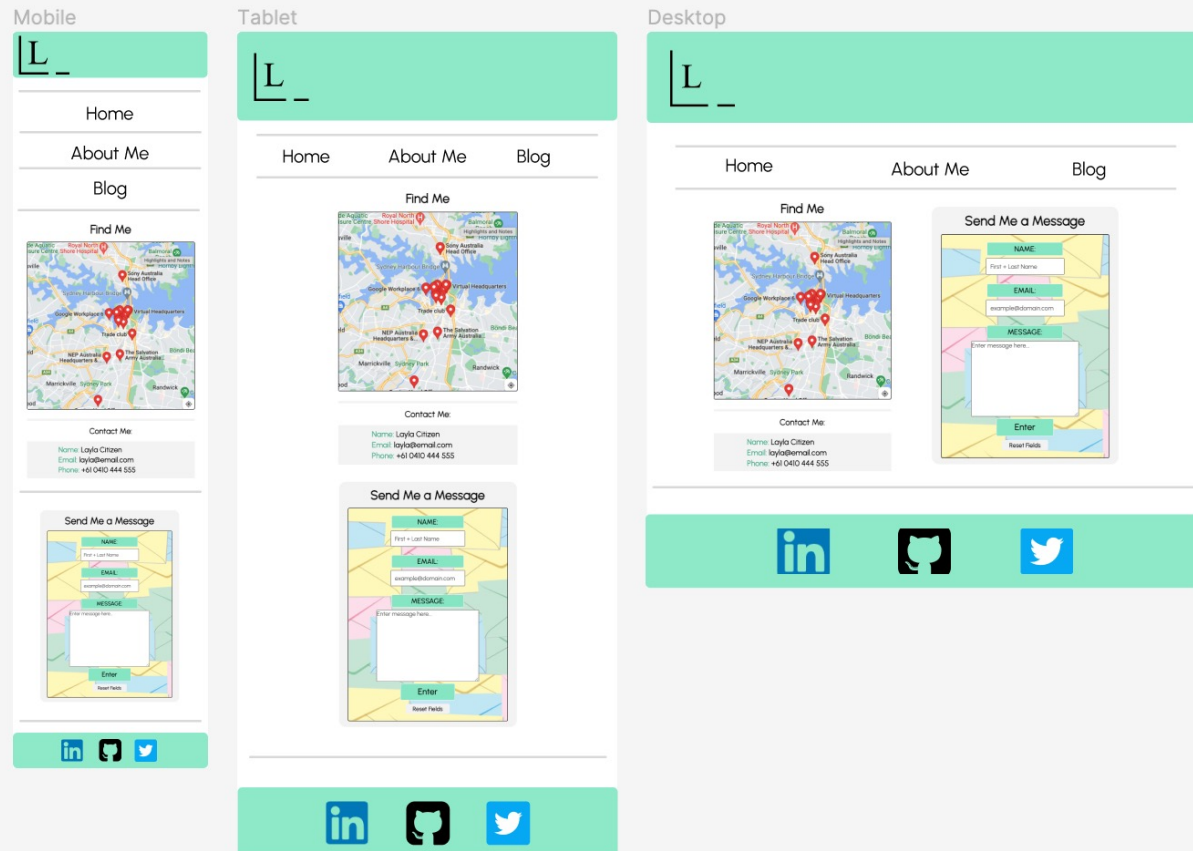

- Again I have stuck to the same simple colour palette. Which I think really emphasizes my content. That is; the colours featured in the images of each of the My Work “cards”.
- Again another image was used to create immediate engagement, this time of my favourite author. This image lends to my other interests, that is; literary interests.
- I additionally added a favourite quote. Not only to reiterate to the user one of my favourite authors, however also to point to my interest in design and artistry, my endeavour in making things beautiful.
- I used an unordered list to allow the user a clear and uncluttered way to learn more about me. My list detailed my love of work, skills in programming, work ethic, eye for design, and logical problem solving capacity.
- I decided to add my resume in the “About Me” page. I thought it the most logical place. The link to my resume is clearly marked with a teal button, and I used a pseudo class to further inform the user that “My Resume” is a link.
- Each of the “cards” that sit under the heading: “My Work” have a couple of different purposes and features. That is, firstly; they display what kind of projects I have worked on. Secondly, they are all links to the relevant blog posts about that particular project. Finally they have some animation in the desktop viewport, that being; the images grow in size when hovered over.
- My major challenge was in getting the relevant card link to the correct part of the blog article. Considering I have used margins for the “Main” content to sit below the fixed headers.
- My favourite part has to be the My Work “cards”, they are a simple and engaging for the user. To not only learn about my work, but to easily navigate to my blog.
- My main ethical issue was the use of images that do not belong to me. Legally I figured because this was a school assignment, the 10% rule applies.

BLOG PAGE - WIREFRAMES

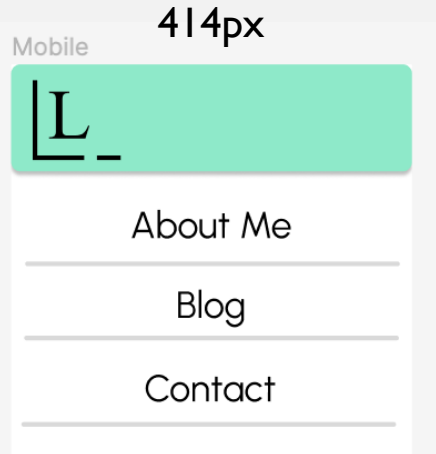

- Again, here I have stuck to the same simple colour palette. This allows my blog images to really jump off the page, and keep my pages consistent and relatable.
- I again used an image at the top of the page, to immediately engage my user, and to inform them of the where they were on my website.
- I decided on another short paragraph to further advise the user of the contents of the page, and to further briefly describe my love of work and building things.
- I used the relevant images to convey the type of project I was speaking about in each blog post.
- All blog posts were accompanied by images, with Lorem Ipsum placeholder text used.
- The challenge was to make sure all blog headings, images, and articles were able to fold evenly, and easily across all screen sizes using flexbox.
- My favourite part of the page is my blog headings. They are simple, clean, and functional. They beautifully divide each of the five blog posts.
- Again, my ethical issue is that the images do not belong to me.

CONTACT PAGE - WIREFRAMES

- The same consistent colour scheme also exists on the Contact page. The simple colour scheme does not distract from the important content on my page.
- Again I used an image to create that initial engagement from the user. That is; the map image is self-descriptive, in that it functions as a link to the address of my workplace.
- The design of the email form is also a little more interesting for the user. Because forms tend to be dull by nature, I decided to add a descriptive background image to add excitement, and relate the purpose of the form.
- The form also has the handy “Reset” button at the bottom, to allow the user to clear the form easily and start their message again if need be.
- The form has to be my favourite part of this page. It is definitely more enticing to use than most other forms in general.
- I also added all my contact details to add an extra option for the user to have a choice of how they would like to contact me.
- The challenge was initially in styling the labels of the form. I had to override the “labels” display of inline block.
- Again the ethical issue is the use of the background image on the form. It does not belong to me.

HEADER COMPONENTS

- These are the three Header components for all three viewports I based my designs on (media breakpoints); Mobile, Tablet, & Desktop. For ease I have used the Home page.
- The Headers of all pages are made up of three sub-components. That is; a teal banner, a logo, and a menu list. This creates a consistency in styling for my audience, showing the user that all pages are related.
- All menu items are links to their associated pages.
- The logo always links to the home page. Making navigation even easier for the user.
- In each page all Headers are fixed to the top of the page. This style choice was made so that the user is always able to navigate easily across all pages, no matter where they have scrolled down a page.

Hi, My Name Is Layla.

A Favourite Place, Turkey

A Little About Me..

- I love to build things
- Front-ends should always be beautiful
- Back-ends should always be logical
- A problem should always be in the company of a solution
- Always be a workhorse, before a showpony

Welcome To My Blog...

The world of my work.

Take a Look Around...

This blog is to showcase my work. That is; past projects I have worked on as a developer, that I am wholeheartedly proud of.

In each project I will discuss my motives, inspirations, and solutions for any problems I faced, and ultimately overcome.

I had a lot of fun working on these projects, so please take a scroll through, Layla.

- All pages in the “Top Section” are made up of a number of different components to engage the audience.
- I have used a number of images on all pages to immediately capture the user.
- I have used short paragraphs, with light grey backgrounds to interest the user, and further by inform them about the page they are on.
- I have used a bullet list for extra ease & swift readability for the user.
- I have used a decorative, fully functional form that allows the user to easily email me, however have left all contact details as an extra option for the user to instead engage with.
- I have used a short interesting quote as another component to create further interest/curiosity in my website by the user.
- I have used two separate links, styled differently for the user. The first a teal button to easily find my resume, and an image (map) to easily find my workplace.

Find Me

MAIN COMPONENTS – BOTTOM SECTION

Trade Management App Project

Published 6/11/22. Authored by: Layla.

My Work

Fitness Tracker App Project

Published 5/11/22

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Blandit aliquam etiam erat velit scelerisque in dictum non. Quis viverra nibh cras pulvinar mattis nunc sed blandit libero. Est sit amet facilisis magna.

Accumsan tortor posuere ac ut consequat semper. Blandit cursus risus at ultrices mi. Ut enim blandit volutpat maecenas volutpat blandit aliquam. Sit amet venenatis urna cursus eget nunc scelerisque viverra mauris. Porttitor massa id neque aliquam vestibulum.

- All pages in the “Bottom Section” are made up of a number of different components to engage the audience.
- I used a series of different “cards” on the “About Me” page; such as the: “Fitness Tracker App Project” card to the left. All cards were made up of a heading, image and byline. These cards are all links to my “Blog” page. These were used to quickly engage the user, give them the information they needed, and the power to easily navigate to that particular blog article.
- Again, I used images to accompany all blog paragraphs to interest the user in that particular post, and break up the text.
- I used vibrantly styled headings for each of the blog posts. That is; the use of teal top and bottom bordered headings. This helped to break up each blog post for readability.
- Finally, I used light gray borders to break up different sections of the page.

FOOTER COMPONENTS

414px

834px

1224px

- These are the three Footer components for all three viewports. That is; Mobile, Tablet, & Desktop.
- The Footers on all pages are made up of four sub-components. That is; a teal banner, and three image logo links to each of my social media accounts. That is; LinkedIn, Gitbub, and Twitter. This, again creates a consistency in styling for my audience, showing the user that all pages are related.
- These Footer components are present across all four webpages. This was to give the user easy access to my social media pages at any time, on any page.
- In each page all Footers are fixed at the bottom of the page. This style choice, was made to allow the user to always engage my socials, no matter where they have scrolled on a page.
